

## **CS2180: ARTIFICIAL INTELLIGENCE LAB-3**

### **README**

- When we extract the zip file then a new folder called code is formed in the preferred directory.
- There will be a file named program.py .
- We can execute the file with the command `python3 program.py`.
- We have to make sure that our current directory is in that code folder while executing the code.
- The program will ask a .txt file then we have to give the name of the text file with extension .txt and the file must present in the same directory as the program.py resides.

We have to open the terminal in the
