# CS2180: Artificial Intelligence Lab-4

## README:

· When we extract the zip file then a new folder called code is formed in the preferred directory. In that code folder there will be another folder called tracking in which all the codes are present.

· We have to make sure that our current directory is in that tracking folder while executing the code.

· To run all the questions at once we can run the command:
  python3 autograder.py
  It can be run for one particular question, such as q2, by:
  python3 autograder.py -q q2
  It can be run for specific testcases of a particular question, such as to run test case 1 of q2, by:
  python3 autograder.py -t test_cases/q2/1-product-rule

· To play the game by ourselves with keyboard, run the command:

  python3 busters.py
